

1. MIRROR

- a. zoom out. Usually this mirror is located either on my window sill either on the table. When I want to use it I put it on the table.
- b. zoom in. It makes an interface to me because mirror directly interacts with the user by showing the reflection of the user.

2.

- Everybody who wants or need to use it.
- Humans are connected to this interface. Without mirrors we would not be able to see how we look.
- Interface allows us to see how our body, face looks and based on that we can make decisions about which clothes to wear today, choose the outfit that fits the best, look in what condition our skin is or do makeup.
- User can interact with the interface simply just by looking on it.
- Material properties are glass and metal.

2. CANDLE

- a. zoom out. This candle is located on my shelf. I like to light it in the evenings.
- b. zoom in. It makes an interface to me because by using it, it brings warmth and coziness to my room.

2.

- Every individual who likes candles.
- Humans are connected to this interface. User needs to light a candle. Without human interaction the candle is useless.
- Interface affects the user by ability to feel warmth and comfort in evenings. It helps to relax and calm down. Also the smell is very pleasing.
- User interacts with the interface by using a lighter.
- Material properties are glass and wax.
